Sevas Kodit internet connection, instructions below.

1. **Basic service**

   All Sevas Kodit residents are offered a 50M Internet connection from Elisa Oy. The connection is included in the rent.

2. **How to activate the internet connection**

   The internet connection must be activated, even though it is included in the tenancy agreement. The tenant can visit the website of Elisa Oy (www.elisa.fi) and "purchase" the connection for 0 €. This activates the connection at the tenants address and the service will start working.

3. **Hardware requirements**

   - **Furnished student apartments:**
     If the room is furnished, a furniture fee must be paid in addition to the rent. Cable modem is also provided in furnished rooms. Which makes it easy to set up the connection.
   - **Unfurnished student apartments:**
     In unfurnished apartments, tenants are responsible for acquiring a cable modem or Wi-Fi router. Depending on the apartments technical specifications, tenants may need either an Ethernet cable or a cable modem.

4. **Connection types**

   - **Ethernet connection:**
     If the apartment has an Ethernet socket, the tenant can connect their computer or Wi-Fi router directly to this socket.
   - **Cable modem connection:**
     If there is no Ethernet socket, the tenant will need a cable modem and a splitter to connect to the TV socket. This equipment allows the internet connection to be used over the cable network.

     Note: To ensure the functionality of a cable modem connection, you must also contact Elisa Oy's costumer service by phone and provide the MAC address from your cable modem, which Elisa needs to activate the device.

5. Necessary accessories

   Tenants must purchase their own Wi-Fi router or cable modem if these are not provided with the apartment. At the Elisa store, such as is Ideapark, staff can help you to select the right device and also activate the connection if needed.

6. Verifying operation

   Once the equipment is installed and the connection is activated through Elisa Oy's website, the internet connection should work in the apartment without any further action.
   The internet connection provided by Sevas Kodit is convenient for residents, but its setup requires some action on the tenant's part, especially in apartments that require a cable modem.
